Document 1: Personal Data (Privacy) Ordinance (PDPO) Assessment Summary

Project: UrbanAir AI Edge-to-Cloud Air Quality Monitoring Platform

Date of Assessment: 12 June 2026

Prepared by: Founder Team (with external privacy counsel review)

Scope: Collection, processing, and storage of environmental sensor data linked to anonymized health outcome data for risk modeling during pilot phase in Sham Shui Po district.

Data Categories: Environmental readings (PM2.5, NO₂, etc.), device metadata, anonymized health visit aggregates (no direct identifiers).

Legal Basis: Legitimate interest (public health improvement) + consent where applicable for health data linkage.

Risk Level: Low to Medium. DPIA conducted. No high-risk processing identified for pilot scale.

Key Mitigations Implemented: Data minimization, pseudonymization of health linkage, access logging, retention policy (raw data 90 days, aggregates 3 years), encryption in transit and at rest.

Conclusion: Pilot phase compliant with PDPO. Full organizational compliance program (policies, training, breach response) to be implemented pre-scale-up.

Document 2: Sensor Calibration & Performance Certificate (Pilot Phase)

Certificate No.: UA-2026-PILOT-00347

Issuing Body (simulated): UrbanAir AI Quality Assurance Laboratory (traceable to HK EPD reference stations)

Period Covered: 1 March – 30 June 2026

Device Model: UA-Node-v2.1 (25 units deployed)

Performance vs Reference (collocation periods):

- PM2.5: $R^2 = 0.91$, RMSE = 3.8 $\mu\text{g}/\text{m}^3$ (target < 5.0)
- NO₂: $R^2 = 0.87$, RMSE = 4.2 ppb
- Overall uptime: 99.6%
- Drift after auto-calibration: < 6% over 4 weeks

Conclusion: All deployed units met or exceeded pilot success criteria. Calibration traceability maintained via periodic reference station anchoring.
